

# SOC 321G: Global Health Issues and Health Systems

Unique: #46090

*Tuesday & Thursday | 9:30 – 11:00 AM | PAR 301*

Instructor : Asya Saydam, M.A., Ph.D. Candidate (she/her)  
How to read : /'ɑ:s:ja/ (AHSS-yah) Here, [Joanna](#) pronounces close to the original read.  
How to reach me : Email is the best way to contact me.  
Email : [asyasaydam@utexas.edu](mailto:asyasaydam@utexas.edu)  
Office Hours : Th 13:00 – 14:30 PM, RLP 3<sup>rd</sup> Floor Cubicle#2, and always by appointment

Hello everyone, and *welcome to Global Health Issues and Health Systems!*

Our class will be in person, with occasional periods when we may meet via Zoom or asynchronously.

I will keep you posted via Announcements in Canvas. Please check those frequently. All course materials, readings, and assignments will be available on our [Canvas course site](#).

## **Course Description**

Every major challenge facing the world today such as the recent pandemics, ever-increasing climate change, never ending armed conflict and food insecurity: they all have consequences for health that are not shared equally. Where we are born, the resources we have, and the governments and institutions around us shape who gets sick, who receives care, and who lives a long, healthy life. Drawing on sociology, public health, medicine, economics, political science, and anthropology, this course treats health as a fundamentally social phenomenon. Rather than viewing disease simply as a medical problem, we investigate the political, economic, historical, and environmental conditions that shape global patterns of health and inequality.

We begin by exploring the foundations of global health and the major challenges facing populations today, including infectious diseases, chronic illness, climate change, reproductive health, and global health inequities with a biosocial approach. We then turn to the institutions that respond to these challenges, comparing health systems across world regions and evaluating how governments, international organizations, and communities work to improve population health. Throughout the semester, students will develop a critical understanding of global health not simply as the study of diseases and treatment, but as the study of how societies produce, distribute, and respond to health and illness.

## **Course Objectives**

*By the end of this class, you will be able to:*

- Describe the global health issues, trends, and policies.
- Understand how population growth, disease, environmental changes, and economic and political activities impact global health

- Assess and analyze global health program interventions and their impacts on individuals and societies
- Compare and synthesize health issues and health systems across countries and world regions, with particular attention to global inequalities and historical relationships between the Global North and Global South
- Synthesize findings to highlight common patterns and unique differences in health challenges between and within major world regions

**Prerequisites for the class:** None

## **Required Texts**

Farmer, P., J.Y. Kim, A. Kleinman and M. Basilio. 2013. *Reimagining Global Health: An Introduction*, Berkeley, CA. University of California Press

→ This book is available [online in the library](#) and you can download every chapter of this book.

Journal Articles: In addition to the above textbook, other course materials including additional readings will be posted on Canvas each week.

## **Assignments and Grading**

All class activity guidelines and evaluation rubrics for evaluations will be posted on Canvas. Your grade will be based on the following **6 components**:

|   | Assignment                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Weight     |
|---|-------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| 1 | <b>Introductory Survey</b>                      | A short survey for me to get to know you! This will be done in the first week of class.                                                                                                                                                                                                                                                                                                                                                                       | <b>1%</b>  |
| 2 | <b>Class Participation &amp; Attendance</b>     | We will all learn the most from this course by showing up for class prepared to discuss the readings and willing to engage with each other. Attendance will be taken. You are allowed 3 no-questions-asked absences throughout the semester. Additional absences will result in a 1-point deduction from your Class Participation & Attendance grade.                                                                                                         | <b>11%</b> |
| 3 | <b>In Class Debates (Assignment 1)</b>          | Throughout the semester, students will participate in a series of structured debates on major controversies in global health. Each student will debate one topic being either pro or con, and complete brief written reflections on the remaining debates. Debates are intended to help you analyze competing evidence rather than persuade you that one side is objectively correct. Detailed guidelines & criteria for evaluation will be posted on Canvas. | <b>15%</b> |
| 4 | <b>Individual Research Paper (Assignment 2)</b> | This assignment is intended to provide an opportunity to develop an independent research project. Each student is required to write a research paper about a global health issue. This assignment would enable the student to critically examine a global health issue in depth. There will be peer                                                                                                                                                           | <b>35%</b> |

|   |                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |     |
|---|--------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
|   |                                                              | reviews as well as instructor comments on this assignment before final submission of the paper. Detailed instructions and criteria for evaluation will be posted on Canvas. There will be several due dates for this assignment                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |     |
| 5 | <b>Group Project Presentation &amp; Paper (Assignment 3)</b> | The purpose of this project is to provide an opportunity for students to synthesize the materials learned in the course and evaluate health care systems across different national and regional contexts. Students are required to form a group (5-7 students) to prepare, write, and present a group paper. Students should work together as a team to analyze the political, social and economic determinants of health and analyze how delivery systems for preventive and curative health services might be strengthened in the country chosen. Group members will conduct an evaluation of their fellow group members for the final project. Detailed guidelines and criteria for evaluation will be posted on Canvas. | 25% |
| 6 | <b>Photo News Album (Assignment 4)</b>                       | Throughout the semester, students will collect and curate a visual portfolio of global health issues as they appear in the news. The goal of this assignment is to develop an awareness of how global health challenges are experienced and represented in everyday life around the world. Students will create a photo news album consisting of selected news photographs, each accompanied by a brief fact sheet describing the event, its global health significance, and its connection to concepts discussed in class. Detailed guidelines and evaluation criteria will be provided on Canvas.                                                                                                                         | 13% |

### Grading Policy

Final grades are based on the total points earned across all course assignments and activities. I am happy to explain how your grade was calculated and to correct any bookkeeping errors. However, grades are not subject to negotiation or adjustment based on individual circumstances, such as participation in an honors program, academic standing, or requests for extra points. Assignments are available for at least one week. Late work is subject to the Late Work Policy below. Exceptions may be made for documented emergencies or university-approved absences. Final grades are based on whole-number point totals. Fractions will be rounded to the nearest whole number (e.g., 89.4 = 89, 89.5 = 90). I will use +/- grading and the following grading scale:

|           |             |           |                 |
|-----------|-------------|-----------|-----------------|
| <b>A</b>  | 93% & above | <b>C</b>  | 73% – 76.9%     |
| <b>A-</b> | 90% – 92.9% | <b>C-</b> | 70% – 72.9%     |
| <b>B+</b> | 87% – 89.9% | <b>D+</b> | 67% – 69.9%     |
| <b>B</b>  | 83% – 86.9% | <b>D</b>  | 63% – 66.9%     |
| <b>B-</b> | 80% – 82.9% | <b>D-</b> | 60% – 62.9%     |
| <b>C+</b> | 77% – 79.9% | <b>F</b>  | 59.9% and below |

**Final Exam:** There is no final examination in this course.

## **Class Policies and Expectations**

Our class meets every Tuesday and Thursday, and I expect you to attend regularly, arrive on time, and be mentally engaged. What this means is that, please do not use distracting devices such as phones and please avoid distracting activities such as shopping on your devices be it laptop, tablet or anything digital of a kind. Make sure to bring your most comfortable tools to take notes. I prefer pen, pencil, notebooks. You are welcome to take notes in whatever format works best for you as long as your device is being used for course-related purposes. *If you absolutely need to use your phone, let me know in advance.*

I expect everyone to complete the assigned readings before coming to class, as our lectures and discussions will build on them rather than repeat them. Completing the readings in advance will help you get the most out of each class. I will introduce new ideas, examples, and context that extend beyond the assigned materials, making regular attendance essential. Please participate actively by asking questions and contributing to discussions, while raising your hand and waiting to be called on before speaking. If you miss a class, you are responsible for obtaining any notes or materials from a classmate. Being kind always helps.

*Our discussions will sometimes involve difficult or controversial topics. I ask that everyone approach these conversations with curiosity, respect, and a willingness to engage thoughtfully with perspectives that may differ from their own.*

Class attendance and participation cannot be made up. Late assignments are subject to the Late Work Policy below.

**Communication.** You can ask me quick questions after class. For more thorough questions or discussions, please come to my office hours. You can always [email me](#), and please put “Global Health” in the subject line to remind the class. I will reply within 48 hours. Sometimes I simply can’t do that, so please bear with me, because I will surely reply [unless a clear answer already exists in the syllabus].

**Office Hours.** I would like to meet you! My office hours are Thursdays from 1-2:30 pm in RLP 3<sup>rd</sup> floor. I may need to hold office hours via Zoom in certain weeks, and I will let you know in advance. I can hold additional hours if necessary. Email me or come and talk to me after class. The goal of office hours can be to clarify lectures, assignment details, get feedback and help you learn, but also grow as a student.

**Late Work Policy.** I know life happens and you may want to push deadlines. However, imagine that as academics, but also just human beings we all have lives and have deadlines and others that rely on us. So, when you ask for a deadline only considering your own schedule and needs will infringe on the time and schedule of your instructor. Please be mindful of this and if you need to ask for an extension plan ahead and contact me as early as possible. Unless an exception has been arranged with me, late assignments will receive a 5-point deduction for each week they are late.

**Extra Credits & Extra Grades.** There will absolutely be no extra credit for this class this semester.

**Electronics.** Please silence all personal devices before class begins (yes, as if you are in a movie theater!). If you are using an electronic device to take notes, be careful not to distract your neighbors by your searches. Please no audio or video recordings in/of our lectures. Students discovered to have made recordings of the class will be disciplined. HOP 2-9970 prohibits students from recording class instruction (audio or video) unless a student obtains the instructor's permission or Disability & Access has approved audio recording as an accommodation.

**Academic Honesty & Integrity.** You are expected to be honest in all of your academic work.

**Plagiarism** is a serious offense. It is the presentation of another author's words or ideas as if they were your own without citing/referencing. University regulations require that any case of plagiarism be sent to the Dean of Students for review. If you have any questions about documentation, quotations, and related matters, please do not hesitate to ask me before submitting your work.

The General Catalog of the University of Texas states:

"Scholastic dishonesty" includes, but is not limited to, cheating, plagiarism, collusion, falsifying academic records, and any act designed to give unfair academic advantage to the student (such as, but not limited to, submission of essentially the same written assignment for two courses without the prior permission of the instructor, providing false or misleading information in an effort to receive a postponement or an extension on a test, quiz, or other assignment), or the attempt to commit such an act. (Section 11-802).

Cheating and plagiarism serious offences and will not be tolerated. These offences can lead you to be suspended or expelled from the University for scholastic dishonesty. It also undermines your ability to learn and critically think. Cheating includes copying another student's answer on a test or assignment.

Plagiarism includes:

- Copying passages verbatim from another writer's or student's work and representing it as your own work
- Any use of another person's work submitted as one's own work without giving the author sufficient credit (e.g., lack of citation)
- Submitting answers or papers written by another student
- Using someone else's main ideas or parts of their answers/writing into your own answer/writing
- Use of ChatGPT or other AI composition software

All work submitted in this course must be your own, completed in accordance with the [University's Academic Integrity Policies](#).

**Artificial Intelligence Policy.** As suggested above, using AI tools to generate substantive portions of assignments or submitting AI-generated text as your own work is not permitted. Use of AI tools for your assignments will result in point deductions and violations will be treated as academic dishonesty.

Having said that, AI tools are a reality of teaching and learning today. I am aware that you might use these tools but at this point you might also be aware that it is obvious when you do use them. So, use them wisely, for example, only to proofread your own final product. This does not mean AI use is

partially permitted. Academic writing and writing in general take a lot of effort [yes, it is not easy], but it helps your thinking capacity ways in which can't be substituted by any tool. Dependence on AI can seriously hinder your development and learning process in the long run. Critical thinking and writing skills are hard-won and these classes may be a time to practice them before life gets even faster and you may eventually have to work with “machines of mediocrity” (Dingemanse 2026). Dingemanse, Mark. 2026. “How Not to Use ‘AI’ (Workshop).” <https://ideophone.org/how-not-to-use-ai-workshop/>.

## **University Policies**

**Q-Drop Policy.** If you want to drop a class after the 12th class day, you'll need to execute a Q drop before the Q-drop deadline, which typically occurs near the middle of the semester. Under Texas law, you are only allowed six Q drops while you are in college at any public Texas institution. For more information, see: <https://onestop.utexas.edu/registration-and-degree-planning/registering-for-classes/add-drop-a-course/academic-q-drops/>

**Religious Holidays.** Notify me of your pending absence two weeks (or as soon as possible) in advance. If you must miss a class, an examination, a work assignment, or a project in order to observe a religious holy day, you will be given an opportunity to complete the missed work within a reasonable time after the absence.

**Accommodations.** The university – and as the instructor of this class, I – is committed to creating an accessible and inclusive learning environment consistent with university policy and federal and state law. Please let me know if you experience any barriers to learning so I can work with you to ensure you have equal opportunity to participate fully in this course. If you are a student with a disability, or think you may have a disability, and need accommodations please contact Disability and Access (D&A). Please refer to D&A's website for contact and more information: <http://diversity.utexas.edu/disability/>. If you are already registered with D&A, please contact me as early as possible in the semester so we can discuss your approved accommodations and needs in this course. You can contact Disability and Access at 512-471-6259 or Videophone 512-410-6644. <https://disability.utexas.edu/how-to-register/>

**Food & Housing Insecurity.** This is a class on global health systems and issues and yet our local, immediate environment can require attention. Any student who has difficulty accessing sufficient food to eat every day, or who lacks a safe and stable place to live, and believes this may affect their education, is urged to contact the Dean of Students for support and use the UT Outpost for assistance (link [here](#)). If you are comfortable to talk to me, please do. I can learn more and mobilize resources if I can.

**Title IX and Sexual Misconduct.** Title IX prohibits sex discrimination including sexual misconduct, rape, harassment, dating and domestic violence, and stalking. Current UT policy designates all instructors as mandatory reporters of sexual harassment and discrimination under the Title IX law. This means that if students disclose to us specific cases that fall under sex-based discrimination and/or sexual abuse, we are obligated by law to report them to the university Title IX office that investigates and tracks such incidents.

If you need assistance related to Title IX, I will help you learn about the resources available to you. If you or anyone you know has experienced what might be a violation of any sort, please note that there are confidential resources available on and off campus which can be found at this [link](#).

### **Resources at UT:**

**Undergraduate Writing Center:** You might know this service by now, but if not, I highly recommend the Undergraduate Writing Center to those students who wish to improve their writing. They are really helpful!

Contact them at <http://uwc.utexas.edu/> to set up an appointment. You can do the appointment on zoom, which is easier for many. If not, they are located in the Learning Commons in the Perry-Castañeda library on the second floor (PCL 2.330).

**Sanger Learning Center:** The learning center offers classes and workshops, peer academic coaching, and private learning specialist appointments. They also have advice about studying and test-taking on their website.

Check them out at [www.utexas.edu/ugs/slc/](http://www.utexas.edu/ugs/slc/) or 512-471-3614.

Other Recommended resources (for writing); <https://owl.purdue.edu>

**BeVocal:** BeVocal is a university-wide initiative to promote the idea that individual Longhorns have the power to prevent high-risk behavior and harm. At UT Austin all Longhorns have the power to intervene and reduce harm. Check out BeVocal to learn more about how you can help to build a culture of care. <https://www.healthyhorns.utexas.edu/lwc/bevocal.html>

Other University Resources for Students. The university has numerous resources for students to provide assistance and support for your learning:

- ITS: <http://www.utexas.edu/its/>
- Counselling and Mental Health Center: <http://www.cmhc.utexas.edu/individualcounseling.html>
- Student Emergency Services: <http://deanofstudents.utexas.edu/emergency/>
- Libraries: <http://www.lib.utexas.edu/>
- Canvas: <https://utexas.instructure.com/courses/633028/pages/student-tutorials>

**University Policies and Resources for Students Canvas; Here is the link which** provides a list of resources that are important for students as they engage with and navigate your course and the university; <https://utexas.instructure.com/enroll/TP964H>

**Helping Each Other.** Please use your fellow classmates as a resource throughout the semester. Should you find it useful, please turn to the person to your right and left, and exchange names and email addresses here. Contact one another when you need clarification about readings, missed class and need notes, want to study before an exam, etc.

**Name:** \_\_\_\_\_ **Email:** \_\_\_\_\_

## Course Outline and Reading Schedule

TLDR: Everything about the class will be on Canvas.

Your syllabus, your assignment instructions, readings and every possible essential information will be there. What you need to follow is the weekly Course Schedule that is in “Modules” folder on Canvas as well as the Assignments tab. Each of the 15 weeks of the semester is represented as an individual Module. Everything listed under a given Module Week is the work that is due that week. Check Canvas regularly. Changes to the course schedule (lecture topic, assigned reading, and assignments/due dates) may be made at my discretion if circumstances require. I will announce any such changes via a Canvas announcement, and I may also email you all. It is your responsibility to make sure your Canvas account is linked to an up-to-date email account that you check regularly. I will do my best to ensure that you are notified of changes with as much advance notice as possible.

Course is roughly divided into 4 sections:

1. Why are health outcomes unequal around the globe? (Foundations)
2. What are the world's major health challenges? (Challenges)
3. How do institutions attempt to solve them? (Responses)
4. What can we learn from comparing countries? (Health Systems)

| Week                                               | Date       | Topic           | Readings                     | Assignments etc.    |
